Yara Yassine

Engineering student, Big Data & Machine Learning · Applying for an international exchange (2027-2028)

yara.yassine@efrei.net · linkedin.com/in/yara-yassine

PROFILE

Engineering student in Big Data and Machine Learning with a strong academic record and a solid mathematical background. Hands-on experience in data engineering and business intelligence (Snowflake, SQL, Power BI) through a work-study position at Fayat IT. Looking to deepen my knowledge of AI and data science abroad, with the goal of becoming an AI Product Owner in a large group.

EDUCATION

EFREI Paris — Engineering Degree, Major Big Data & Machine Learning (work-study) · 2023 – 2028

Top 15% of the cohort in the preparatory cycle

- **Preparatory cycle (2 years):** mathematics, physics and computer science.
- **Machine learning & AI:** Machine Learning I and II, Deep Learning, Mathematics for Data Scientists, Convex Optimization.
- **Big data & cloud:** Big Data Frameworks, Scala, Advanced and NoSQL Databases, Datalakes and Data Integration, Cloud Computing, DevOps and MLOps.
- **Foundations:** probability and statistics, Python for data science, algorithms and graph theory, signal theory, optimization and complexity, Java, operating systems, networks.

EXPERIENCE

Fayat IT (Fayat Group) — Data Analyst (work-study), Data & Integration team · Sept 2025 – present

- Built Power BI dashboards used in management meetings: KPIs defined with stakeholders and implemented in DAX.
- Developed dashboards to manage the accounts of departed employees and mobile device management (MDM).
- Mapped data flows between MuleSoft, Talend, GoAnywhere and Snowflake; restructured nested JSON into working tables.
- Wrote advanced SQL on Snowflake (CTEs, joins, JSON parsing); built a centralised view of IT support activity from Matrix42 tickets.

LANGUAGES

French fluent · **English** TOEIC 885 · **Arabic** fluent · **Portuguese (Brazil)** beginner, currently learning

PROJECTS

Wine Quality Classification (Machine Learning) · 2026 · team of 3

- Built a model that predicts whether a wine is good from its chemical measurements (6,497 wines). Tested four approaches and kept the most accurate one.

DATABANQUE · 2025

- Designed and implemented an optimised relational database (E/R model, normalisation, complex SQL queries) to manage a real-life project.

Rover Run · 2024 – 2025

- Developed an algorithm in C optimising the movements of a Mars rover.
- Used advanced data structures and efficient memory management.

CDataframe · 2024

- Designed a C library inspired by Pandas for advanced manipulation of tabular data.
- Optimised operations on dynamic structures and handled CSV exports.

ChatBot · 2023

- Implemented a Python chatbot based on TF-IDF for automatic language processing.
- Developed information retrieval models and user interaction handling.

EXTRACURRICULAR ACTIVITIES

EFREI Aides Humanitaires — Volunteer · Sept 2024 – present

- Association helping people in need: participation in maraudes (street outreach rounds distributing meals) and in various events.

SKILLS

Data: Snowflake, SQL, Power BI (DAX), data modelling, JSON
Integration: Talend, MuleSoft, GoAnywhere, Matrix42, Azure, SharePoint
Programming: Python, C, Java, Scala, MySQL
